Material from Royal Museum of Natural sciences is not included due to I prioritized loans from foreign collections.

Results from 2010 visit:

- Inclusion of new data from different species of the genus Ardistomis to the taxonomic revision of this genus.
- Inclusion of new data from different species (probably one new species from Brazil) of the genus *Semiardistomis* to the taxonomic revision of this genus.
- Revision of some close related Neotropical genera unknown to this author; permitting to establish a character polarity for the Ardistomine complex.
- Compilation of new Bibliography in digital format.
